Paperback	: 233 pages

This book explores the complex and fascinating relationship between humans and animals, providing a comprehensive overview of the latest research on domestication and other trans-species relationships.

Domestication is the process by which a population of animals becomes adapted to living in close association with humans. This process has occurred over thousands of years, and has resulted in the development of a wide variety of domesticated animals, including dogs, cats, horses, cows, and pigs.

Trans-species relationships are relationships between humans and animals that are not based on domestication. These relationships can take many different forms, including companionship, work, and even love. Trans-species relationships can be found in all cultures around the world, and they play an important role in human society.

The study of domestication and other trans-species relationships is a relatively new field of research. However, there has been a growing interest in this topic in recent years, as scientists have begun to recognize the importance of these relationships in human evolution and society.

This book brings together a team of leading experts in the field of human-animal studies to provide a comprehensive overview of the latest research on domestication and other trans-species relationships. The book is divided into three parts:

1. The first part of the book provides an overview of the history of domestication and trans-species relationships.
2. The second part of the book examines the biological and social factors that have contributed to the development of domestication and trans-species relationships.
3. The third part of the book explores the implications of domestication and trans-species relationships for human society.

This book is a valuable resource for anyone interested in the relationship between humans and animals. It is a comprehensive and up-to-date overview of the latest research on domestication and other trans-species relationships, and it provides a fascinating glimpse into the complex and ever-changing relationship between humans and the animal world.

Table of Contents

- 1.
2. The History of Domestication
3. The Biological Basis of Domestication
4. The Social Basis of Domestication
